

Taking Your Measurements

Following are the instructions for providing measurements for your hair system. If you have any questions, or aren't sure exactly where you should measure, please contact us so a hair replacement consultant can help you.

Supplies

Flexible measuring tape with centimeters

Wall mirror

Before you begin

NOTE: We need your measurements to be precise so your hair system fits well. Please take the measurements more than once to double check them.

If you wear a hair system or wig, remove it before taking your measurements.

If you have no front hairline or plan to shave it off, find and mark the center point for your front hairline as directed in the previously provided instructions.

Before You Begin *(continued)*

Locate your occipital bone at the back of your head. To do this, place your hand on the back of your neck and slide your hand up towards the crown of your head. The bony protrusion is your occipital bone. Touch that spot and make a mental note of it.

Step 1: Find your length measurement

Place the end of the tape measure on your occipital bone, at the back of your head. Even if you want your hair system to come past the occipital bone, please start your measurement directly on it. We have a formula for creating the appropriate length for the nape extension.

If you have no front hairline, extend the tape measure forward to the mark you made on your forehead. Do not extend the tape measure past this mark.

If you're using your growing front hairline, extend the tape measure forward to the exact spot you plan to place the front of your hair system — no closer than 1/4 inch (6 mm) and no further than 1 inch (2.5 cm) behind your front hairline.

Be sure the tape measure is pulled tight, but not stretched.

Note the measurement. Return to *Gather™*, then go to the **Menu** under **Manual Measurements** and choose **Size**. Enter the measurement, in centimeters, under Step 1.

Step 2: Find your first width measurement

Here you will measure from ear to ear over the top of your head. It is best to fold your ear down and take the measurement from the highest point at which your ear attaches to your head.

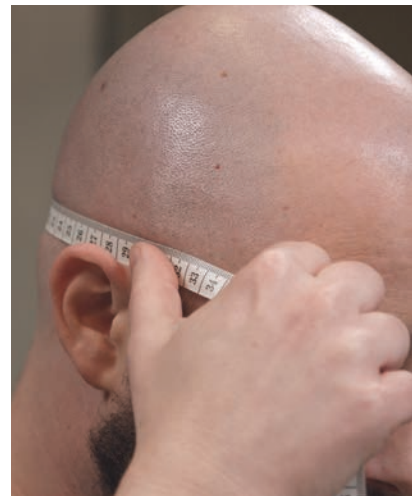

We have a formula for adjusting the system so it does not sit right on your ear and is comfortable for you, but we need you to measure from this point.

Enter the measurement, in centimeters, under Step 2.

Step 3: Find your second width measurement

Here you will measure from ear to ear around the back of your head, along the occipital bone. Start and end the measurements from the front- and top-most point of where your ear attaches to your head.

Enter the measurement, in centimeters, under Step 3.

Step 4: Find your neck measurement

Find the front center point of your neck, from chin to shoulders and side to side.

Measure around the entire circumference of your neck. We have a formula that will turn this measurement into the width for the nape of your hair system.

Enter the measurement, in centimeters, under Step 4.
